

## Keystroke Encryption:

- Protects Online Activity
- Protects Private Information

### The Problem:

Keylogging spyware is the most common malware used to steal everything you type including credentials from your PC or mobile device. Identity theft often begins on your device when keylogging spyware is hidden within an email attachment or downloaded after clicking links inside an email, text message or web page. This practice of tricking unsuspecting victims into clicking on links that look legitimate is called phishing. Studies show that over 90% of attacks begin this way.

In addition, most keyloggers can evade antivirus because they are able to change their form and remain undetected. It has recently been discovered that cybercriminals are using Artificial Intelligence to create these undetectable keyloggers.

---

### The Solution: EndpointLock™ Keystroke Encryption

EndpointLock™ is the only solution to block undetectable keyloggers and stop identity theft in its earliest stages. EndpointLock Keystroke Encryption software blocks keystroke stealing spyware from capturing your private information. It encrypts and protects everything you type into your device. This encryption technology is so effective against cybercrime, it's the method chosen by top financial institutions and the U.S. Air Force.

EndpointLock software:

- Protects all online activity when you bank, shop and more.
- Easy to install and use. Works seamlessly in the background as you type.
- Built-in Dark Web Scanner keeps customers engaged with their own cybersecurity.

### Hackers can't steal what they can't see!

A first line of defense for all online activity

Entering Payment Info

Logging into Financial

Filling out Forms

Making Travel Plans

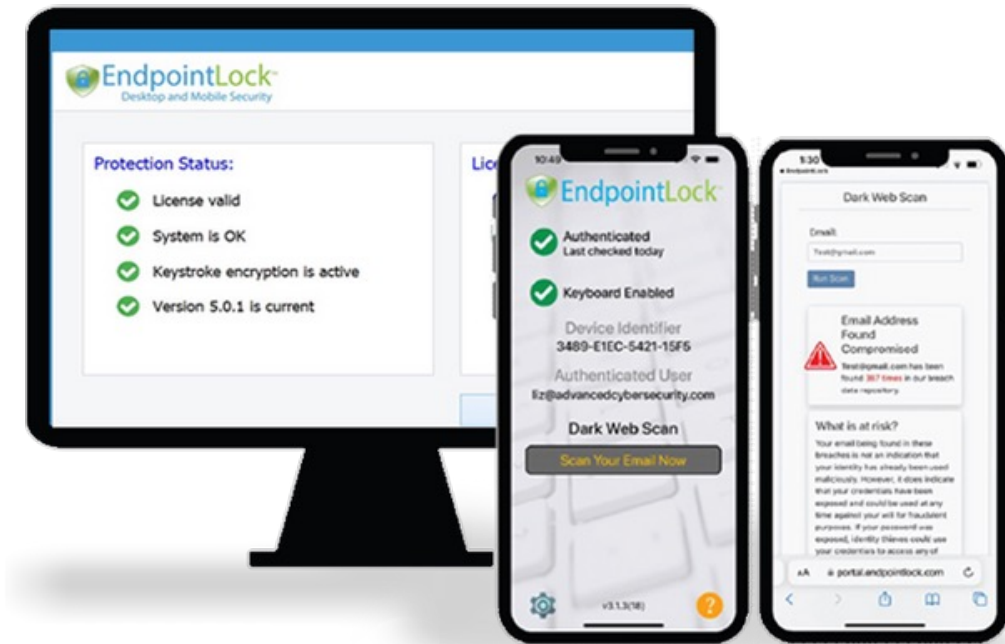

Sending Private Emails

Sending Private Texts

# EndpointLock™

## Features and Benefits

### KEYSTROKE ENCRYPTION

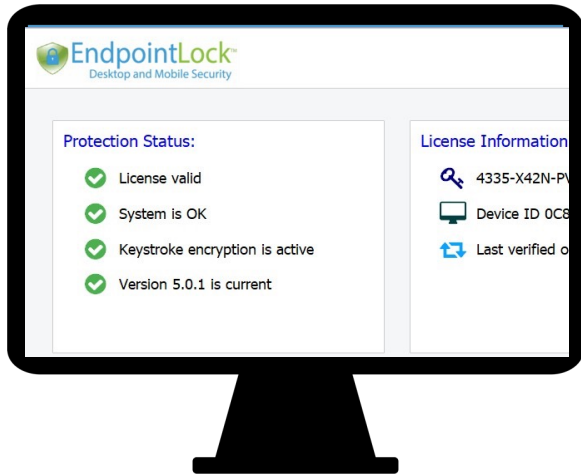

- ▶ Ensures privacy for sensitive information
- ▶ Compatible with Windows, Android and iOS operating systems
- ▶ Blocks the capture of keystrokes on any Windows PC or mobile device
- ▶ Protects from zero-day (unknown) keylogging malware

### UNLIMITED DARK WEB SCANNING

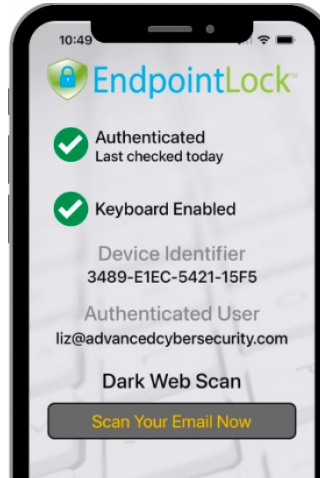

- ▶ Unlimited 24/7 access to scan your email
- ▶ Immediate detailed report results
- ▶ Helps you stay proactive and up-to-date on the security of your account credentials
- ▶ Provides steps you can take to protect your accounts

# The Solution: EndpointLock™ Keystroke Encryption: EndpointLock™ blocks keylogging spyware, the #1 component in identity theft on a device

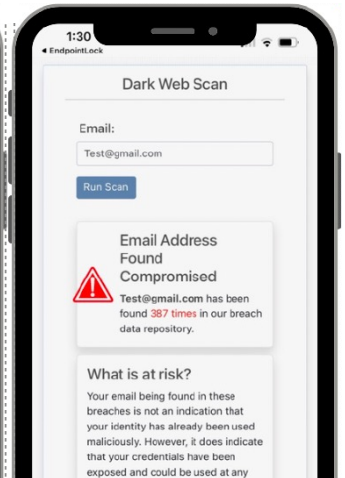

Once the **EndpointLock App for Windows** is activated on your PC, it works seamlessly in the background with no effect on what you are typing.

The **EndpointLock Mobile App** lets you know that your Encrypted Keyboard is enabled.

**Built-In Dark Web Scanner** lets you scan any email at any time right from the app.

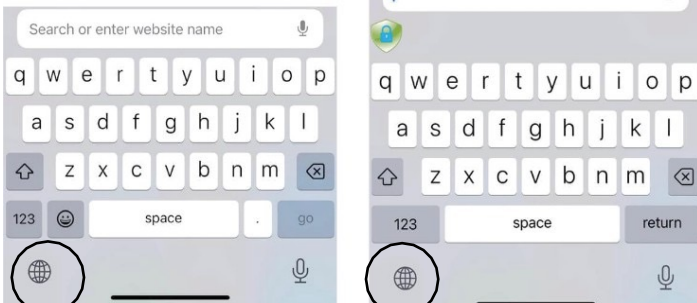

## Using Endpointlock's Mobile Secure Keyboard is as easy as accessing your emojis

Simply tap on your mobile keyboard's "globe" icon for iOS, and "keyboard" icon for Android to switch to the EndpointLock Secure Keyboard whenever you're inputting sensitive data such as banking or credit card information. Tap again to switch back to your "native" default keyboard to enjoy features such as auto correct, that are not available when using the EndpointLock encrypted keyboard for security purposes.
